

Implementation of Favicon

`<link rel="icon" type="image/png" href="favicon.png" />`: This line specifies the favicon for your website. Replace "favicon.png" with the actual path to your favicon image. Make sure the image is in the PNG format for better support.

Place the favicon image in the root directory of your project, and adjust the href attribute accordingly if it's in a different folder.

Remember to create a square image for your favicon, as browsers often display it in a small square space. Common sizes for favicons are 16x16 pixels or 32x32 pixels.

After making these changes, your favicon should appear in the browser tab when the website is opened.

Code

```
<link rel="icon" type="image/x-icon" href="images/favicon.ico" />
</head>
```

Result
